# Introduction

The main aim of this booklet is to exemplify standards for those teaching IGCSE Physics (0625), and to show how different levels of candidates' performance (high, middle and low) relate to the subject's curriculum and assessment objectives.

In this booklet candidate responses have been chosen to exemplify a range of answers. Each response is accompanied by a brief commentary explaining the strengths and weaknesses of the answers.

For each question, response is annotated with clear explanation of where and why marks were awarded or omitted. This, in turn, followed by examiner comments on how the answer could have been improved. In this way it is possible for you to understand what candidates have done to gain their marks and what they will have to do to improve their marks. At the end there is a list of common mistakes candidates made in their answers for each question.

This document provides illustrative examples of candidate work. These help teachers to assess the standard required to achieve marks, beyond the guidance of the mark scheme. Some question types where the answer is clear from the mark scheme, such as short answers and multiple choice, have therefore been omitted.

The questions, mark schemes and pre-release material used here are available to download from Teacher Support. These files are:

### How to use this booklet

### Example Candidate Response – high

1 In this experiment, you will use a pendulum to determine a value for the acceleration of free fall g.
Carry out the following instructions, referring to Figs. 1.1 and 1.2.

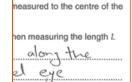

**Answers** by real candidates in exam conditions. These show you the types of answers for each level.

Discuss and analyse the answers with your learners in the classroom to improve their skills.

## **Examiner comments**

Examiner
annotations: Each
response is annotated
with clear explanation
of where and why
marks were awarded or
omitted. In this way it is
possible for you to
understand what
candidates have done
to gain their marks.

The candidate shows understanding of perpendicular viewing of the scale on the metre rule.

# How the candidate could have improved the answer

(d) (iii) The candidate could have suggested the experiment using different lengths, repeating repeating the timing of the 20 oscillations several that merely suggesting repeats, without specific times.

**Examiner comments** This explains how the candidate could have improved the answer. This helps you to interpret the standard of Cambridge exams and helps your learners to refine exam technique.

### Common mistakes

The most common error for this question was the mistake constitutes an Alphabet Agency. Many responses incorre reforms, all legislation passed by the Roosevelt administry commonplace was the inclusion of the Emergency Bankin

**Common mistakes** a list of common mistakes candidates made in their answers for each question.

# Assessment at a glance

All candidates take three papers.

Candidates who have studied the Core subject content, or who are expected to achieve a grade D or below, should be entered for Paper 1, Paper 3 and either Paper 5 or Paper 6. These candidates will be eligible for grades C to G.

Candidates who have studied the Extended subject content (Core and Supplement), and who are expected to achieve a grade C or above, should be entered for Paper 2, Paper 4 and either Paper 5 or Paper 6. These candidates will be eligible for grades A\* to G.

### Core candidates take:

Paper 1 45 minutes Multiple Choice 30%

40 marks

40 four-choice multiple-choice questions Questions will be based on the Core

subject content

Assessing grades C-G Externally assessed

### Paper 2

Extended candidates take:

45 minutes Multiple Choice 30%

40 marks

40 four-choice multiple-choice questions

Questions will be based on the Extended subject content (Core and Supplement)

Assessing grades A\*-G

Externally assessed

### and Core candidates take:

Paper 3 1 hour 15 minutes Theory 50%

80 marks

Short-answer and structured questions Questions will be based on the Core

subject content

Assessing grades C-G Externally assessed

### and Extended candidates take:

Paper 4 1 hour 15 minutes Theory 50%

80 marks

Short-answer and structured questions

Questions will be based on the Extended subject content (Core and

Supplement)

Assessing grades A\*-G

Externally assessed

### All candidates take either:

Paper 5 1 hour 15 minutes Practical Test 20%

40 marks

Questions will be based on the experimental skills in Section 4

Assessing grades A\*-G Externally assessed

Paper 6 1 hour 20% Alternative to Practical

40 marks

Questions will be based on the experimental skills in Section 4

Assessing grades A\*-G

Externally assessed

Teachers are reminded that the latest syllabus is available on our public website at www.cie.org.uk and Teacher Support at https://teachers.cie.org.uk

# Question 1

# Example candidate response - high

### **Examiner comments**

1 A student is investigating the stretching of a spring.

The apparatus is shown in Fig. 1.1.

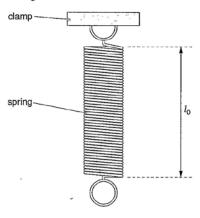

Fig. 1.1

- (a) On Fig. 1.1, measure the unstretched length  $l_0$  of the spring. Record  $l_0$  in the first row of Table 1.1.
- (b) The student hangs a load L of 1.0N on the spring and measures the new length L of the spring. She repeats the measurements using loads of 2.0N, 3.0N, 4.0N and 5.0N. The readings are shown in Table 1.1.
  - (i) For each set of readings, calculate the extension e of the spring using the equation  $e = (l l_0)$ . Record the values of e in the table.

Table 1.1

1			
	e/mm	1/mm	L/N
1	0	55	0.0
	4	59	1.0
	9	64	2.0
	14	69	3.0
	<u>1</u> 9	74	4.0
2	23	78	5.0

(ii) Explain briefly one precaution that you would take in order to obtain reliable readings.

1 The candidate measures and records the length correctly.

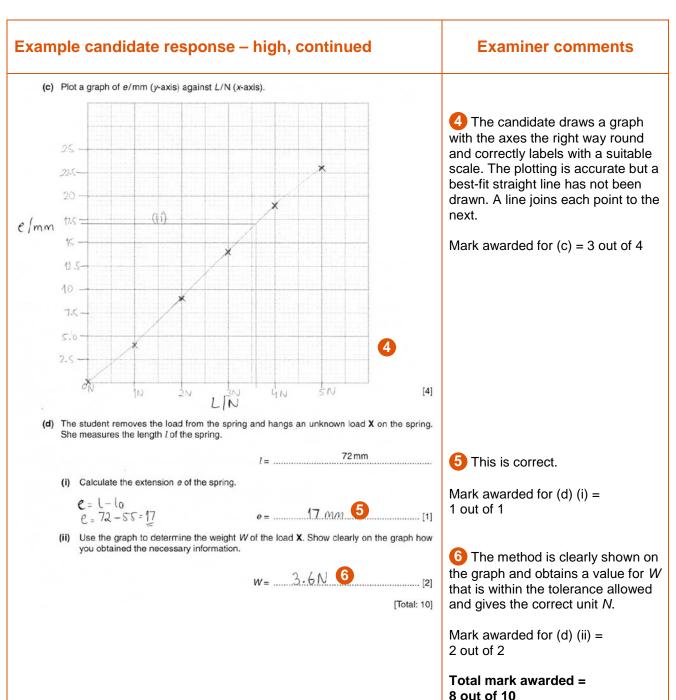

Mark awarded for (a) = 1 out of 1

2 The values of extension have been successfully calculated.

Mark awarded for (b) (i) = 1 out of 1

3 The suggested procedure contradicts the description of the experiment.

Mark awarded for (b) (ii) = 0 out of 1

The candidate needed to write a relevant precaution describing how to read the rule to obtain a reliable reading.

The graph line should have been a best-fit straight line.

### Example candidate response - middle

### **Examiner comments**

1 A student is investigating the stretching of a spring.

The apparatus is shown in Fig. 1.1.

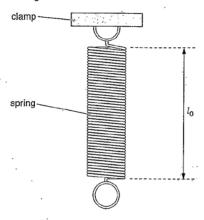

Fig. 1.1

- (a) On Fig. 1.1, measure the unstretched length  $l_0$  of the spring. Record  $l_0$  in the first row of Table 1.1.
- (b) The student hangs a load L of 1.0N on the spring and measures the new length L of the spring. She repeats the measurements using loads of 2.0N, 3.0N, 4.0N and 5.0N. The readings are shown in Table 1.1.
  - (i) For each set of réadings, calculate the extension e of the spring using the equation  $e=(l-l_0)$ . Record the values of e in the table.

Table 1.1

L/N	1/mm	e/mm	
0.0	<b>5</b> 5.	0 .	70
1.0	59	4.	
2.0	64	- 9	
3.0	69	14	
4.0	74	19	-
5.0	78	23	2

(ii) Explain briefly one precaution that you would take in order to obtain reliable readings.

1 The candidate measures and records the length correctly.

Mark awarded for (a) = 1 out of 1

2 The values of extension have been correctly calculated.

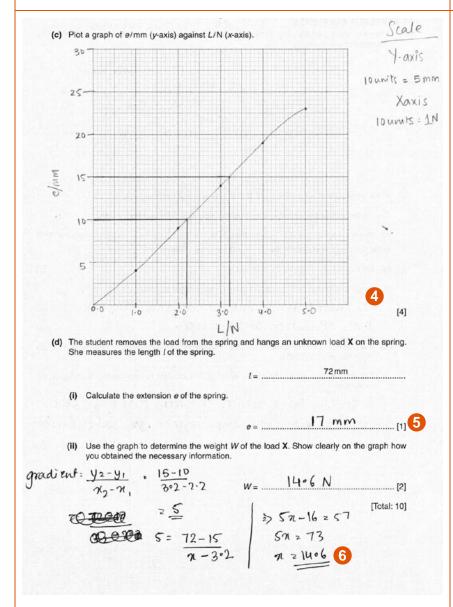

Mark awarded for (b) (i) = 1 out of 1

3 The candidate's suggestion is not a relevant precaution but a vague statement about avoiding carelessness.

Mark awarded for (b) (ii) = 0 out of 1

# Example candidate response – middle, continued

### **Examiner comments**

4 The candidate draws a graph with the axes the right way round and correctly labels with a suitable scale. The plotting is accurate but the candidate does not draw a best-fit straight line. The candidate draws a line that joins each point to the next.

Mark awarded for (c) = 3 out of 4

5 Extension has been calculated correctly.

Mark awarded for (d) (i) = 1 out of 1

6 The candidate does not take a reading of *W* at the point on the graph where the extension e = 17mm, but calculates the gradient and then goes on to some further calculations.

Mark awarded for (d) (ii) = 0 out of 2

Total mark awarded = 6 out of 10

### How the candidate could have improved the answer

The candidate needed to write a relevant precaution describing how to read the rule to obtain a reliable reading.

The graph line should have been a best-fit straight line.

The candidate needed to read the load from the graph at the point where the extension is 17 mm.

### Example candidate response - low

### **Examiner comments**

1 A student is investigating the stretching of a spring.

The apparatus is shown in Fig. 1.1.

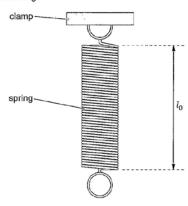

Fig. 1.1

- (a) On Fig. 1.1, measure the unstretched length  $l_0$  of the spring. Record  $l_0$  in the first row of Table 1.1. [1]
- (b) The student hangs a load L of 1.0 N on the spring and measures the new length Lof the spring. She repeats the measurements using loads of 2.0 N, 3.0 N, 4.0 N and 5.0 N. The readings are shown in Table 1.1.
  - (i) For each set of readings, calculate the extension e of the spring using the equation  $e=(l-l_0)$ . Record the values of e in the table.

Table 1.1

L/N	l/mm	e/mm
0.0	55	0
1.0	, 59	4
2.0	64	5
3.0	69	5
4.0	. 74	5
5.0	78	4

[1]

(ii) Explain briefly one precaution that you would take in order to obtain reliable readings.

It was a spring law the spring law could happen
in this pragress, when the weight was increase [1]
may be the spring just decreasing it range from original

1 This is correct.

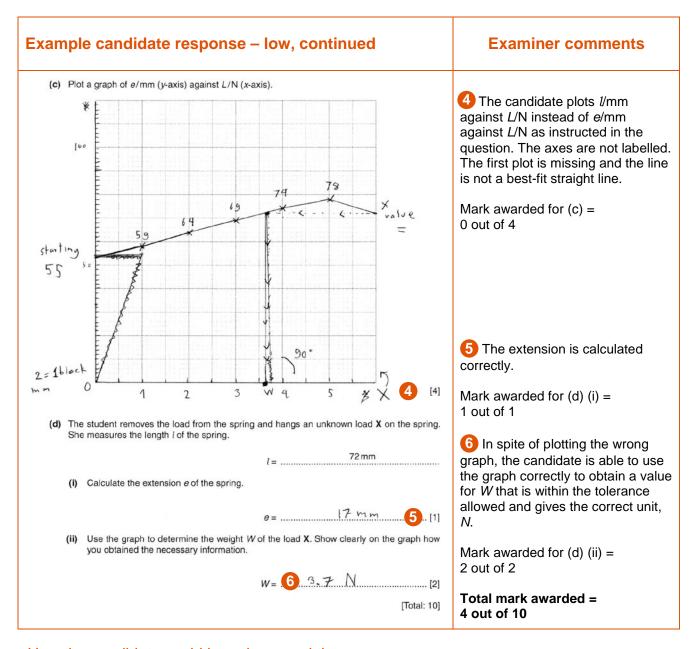

Mark awarded for (a) (i) = 1 out of 1

2 The candidate does not calculate the extension for each value of the load but calculates the change in extension for each value of load.

Mark awarded for (b) (i) = 0 out of 1

3 The candidate makes a comment about 'the spring law' instead of writing a precaution.

Mark awarded for (b) (ii) = 0 out of 1

The candidate should have understood what was meant by the extension of a spring to calculate the values correctly.

A relevant precaution describing how to read the rule should have been used to obtain a reliable reading.

The candidate should have plotted extension on the *y*-axis of the graph and then plot all the points accurately and draw a best-fit straight line.

### Common mistakes candidates made in this question

- Writing a vague statement rather than a relevant precaution describing how to read the rule to obtain a reliable reading.
- Making a poor judgement of the best-fit straight line on the graph.

# Question 2

### Example candidate response - high

### **Examiner comments**

2 A student is using a balancing method to determine the weight of a piece of soft modelling clay. The apparatus is shown in Fig. 2.1.

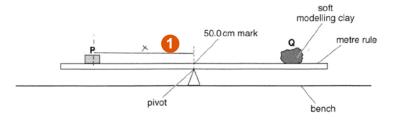

Fig. 2.1

**P** is a metal cube of weight  $P = 1.0 \,\text{N}$ . **Q** is the piece of soft modelling clay.

The student places the cube  $\bf P$  so that its weight acts at a distance  $\bf x$  from the pivot.

He adjusts the position of  $\bf Q$  to balance the rule and measures the distance y from the centre of  $\bf Q$  to the pivot. He calculates the weight W of  $\bf Q$  using the equation  $W = \frac{PX}{V}$ .

(a) On Fig. 2.1, mark clearly the distance x.

(b) Suggest a change to Q that would make it easier to find the value of y accurately.

(c) It is difficult to achieve an exact balance of the metre rule in this type of experiment. This can make the result unreliable.

Explain how you would reduce the effect of this problem to improve the reliability of the experiment.

1 The candidate correctly marks the distance *x* on Fig. 2.1.

Mark awarded for (a) = 1 out of 1

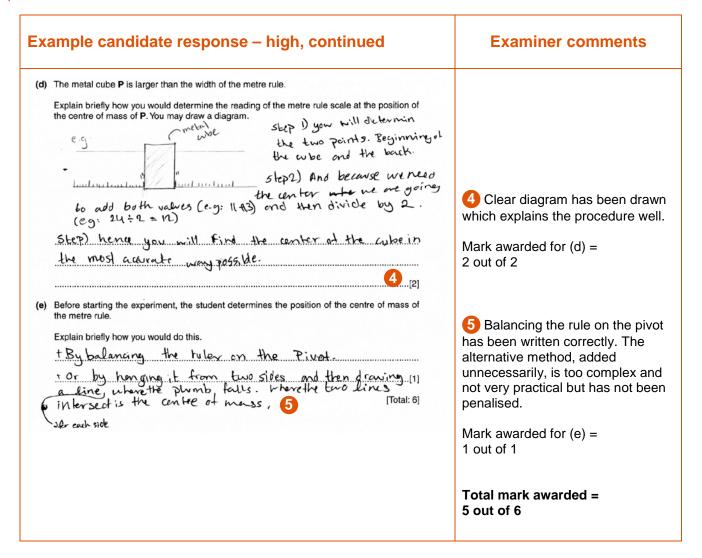

2 This is a good suggestion for the change to **Q**.

[1]

Mark awarded for (b) = 1 out of 1

3 Exact balance has not been addressed but the candidate writes about precautions that are taken to obtain accurate distance readings.

Mark awarded for (c) = 0 out of 1

- (c) The candidate should have used the experience gained during the course to describe what was done in this type of experiment. For example moving **Q** slowly one way until the rule just tips, then moving **Q** the other way until the rule tips back and taking the reading between these two positions of **Q**.
- **(e)** Although the candidate was awarded the mark, it would have been better to have written only about balancing the rule on the pivot and not to add a second, rather impractical method.

### Example candidate response - middle

### **Examiner comments**

2 A student is using a balancing method to determine the weight of a piece of soft modelling clay. The apparatus is shown in Fig. 2.1.

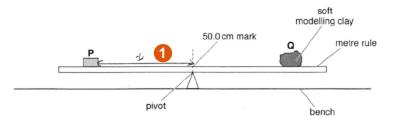

Fig. 2.1

 ${\bf P}$  is a metal cube of weight  $P=1.0\,{\rm N}$ .  ${\bf Q}$  is the piece of soft modelling clay.

The student places the cube  ${\bf P}$  so that its weight acts at a distance  ${\bf x}$  from the pivot.

He adjusts the position of  $\bf Q$  to balance the rule and measures the distance y from the centre of  $\bf Q$  to the pivot. He calculates the weight W of  $\bf Q$  using the equation  $W = \frac{P\chi}{v}$ .

(a) On Fig. 2.1, mark clearly the distance x.

[1]

(b) Suggest a change to Q that would make it easier to find the value of y accurately.

(c) It is difficult to achieve an exact balance of the metre rule in this type of experiment. This can make the result unreliable.

Explain how you would reduce the effect of this problem to improve the reliability of the experiment.

1 The candidate shows the distance to one edge of the cube, not the centre.

Mark awarded for (a) = 0 out of 1

2 This is a vague answer.

Mark awarded for (b) = 0 out of 1

The answer suggests repeating the experiment several times and taking the average.

Mark awarded for (c) = 1 out of 1

# Example candidate response – middle, continued **Examiner comments** (d) The metal cube P is larger than the width of the metre rule. Explain briefly how you would determine the reading of the metre rule scale at the position of the centre of mass of **P**. You may draw a diagram. -> netre vulc motal cube. The candidate indicates a correct method but the response is too vague to gain both marks. By dividing the moss equally on both sides Mark awarded for (d) = 1 out of 2 Before starting the experiment, the student determines the position of the centre of mass of the metre rule. Explain briefly how you would do this. This is correct. Mark awarded for (e) = 1 out of 1 Total mark awarded = 3 out of 11

### How the candidate could have improved the answer

- (a) The distance x to the centre of the block should have been shown.
- **(b)** The candidate should have suggested an appropriate shape (e.g. a cube).
- (d) Writing should have been clearer that the block width must be measured.

### **Example Candidate Response – low**

### **Examiner comments**

A student is using a balancing method to determine the weight of a piece of soft modelling clay. The apparatus is shown in Fig. 2.1.

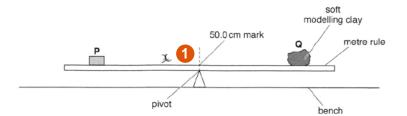

Fig. 2.1

 ${\bf P}$  is a metal cube of weight  $P=1.0\,{\rm N}$ .  ${\bf Q}$  is the piece of soft modelling clay.

The student places the cube  $\mathbf{P}$  so that its weight acts at a distance x from the pivot.

He adjusts the position of  ${\bf Q}$  to balance the rule and measures the distance y from the centre of  ${\bf Q}$ to the pivot. He calculates the weight W of Q using the equation  $W = \frac{P_X}{V}$ 

(a) On Fig. 2.1, mark clearly the distance x.

[1]

(c) It is difficult to achieve an exact balance of the metre rule in this type of experiment. This can make the result unreliable.

Explain how you would reduce the effect of this problem to improve the reliability of the

1 The candidate does not mark the distance x clearly.

Mark awarded for (a) = 0 out of 1

This does not answer the question.

Mark awarded for (b) = 0 out of 1

The candidate correctly suggests repeating the experiment several times and taking the average.

Mark awarded for (c) = 1 out of 1

Example candidate r	esponse – low, continued	Examiner comments
(d) The metal cube P is larger than	the width of the metre rule.	
Explain briefly how you would deather the centre of mass of <b>P</b> . You ma	etermine the reading of the metre rule scale at the position of y draw a diagram.	
	d measure the reading	4 This does not answer the question.  Mark awarded for (d) =
	the student determines the position of the centre of mass of	0 out of 2
Explain briefly how you would o	o this.	5 This is correct.
does n'i	1 till 5	Mark awarded for (e) = 1 out of 1
	[Total: 6]	Total mark awarded = 2 out of 6

- (a) The candidate should have shown the distance x from the pivot to the centre of the block.
- **(b)** An appropriate shape should have been suggested (e.g. a cube).
- **(c)** The candidate needed to explain that the width of the cube must be measured and then the block positioned so that half the width lays either side of the required position. A diagram makes it much easier for the candidate to describe this.

### Common mistakes candidates made in this question

Writing vague responses to parts (c) and (d). Candidates should realise that they are being asked to write from their own experience of carrying out similar experiments during their course.

# Question 3

### **Example Candidate Response – high**

### **Examiner comments**

3 A student is investigating the magnification of images produced by a lens.

The apparatus is shown in Fig. 3.1.

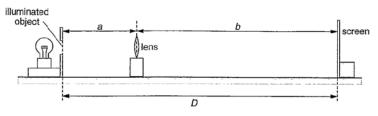

Fig. 3.1

The student places a screen at a distance  $D = 80.0 \,\mathrm{cm}$  from an illuminated object. The screen and the illuminated object remain in the same positions throughout the experiment.

(a) She places the lens close to the illuminated object. She moves the lens until she sees a sharply focused, enlarged image of the object on the screen.

She measures the distance a from the illuminated object to the centre of the lens.

She measures the distance b from the centre of the lens to the screen.

Calculate the magnification  $m_1$  of the image, using the equation  $m_1 = \frac{b}{a}$ .

1 The calculation is correct.

Mark awarded for (a) = 1 out of 1

Exa	ample Candidate Response – high, continued	Examiner comments
(b)	The student then moves the lens towards the screen until a <b>smaller</b> , sharply focused image of the object is seen on the screen.	
	She measures the distance $x$ from the illuminated object to the centre of the lens.	
	x =60.2cm	
	She measures the distance $\gamma$ from the centre of the lens to the screen.	
	y=y=	
	Calculate the magnification $m_2$ of the image, using the equation $m_2 = \frac{y}{\chi}$ .	
	$m_2 = \frac{0.329}{2}$ [1]	2 The calculation is correct.
(c)	A student suggests that $m_1 \times m_2$ should equal 1.	Mark awarded for (b) = 1 out of 1
	State whether the results support this suggestion. Justify your answer by reference to the results.	_
		3 The statement is correct and
	Yes	the justification is clearly explained.
	justification M1 × M2 = 0.967 < 1, but the pesult is within the limit of experimental accuracy.	Mark awarded for (c) = 2 out of 2
	is within the 18th XI MIT of Experimental according. [2]	
(d)	State two precautions that you would take in this experiment to obtain reliable results.  Keep the object, lens and screen of the same height.	4 The candidate suggests two sensible precautions.
,	1	
	Do the experiment in a dark toom. 4	Mark awarded for (d) = 2 out of 2
	[2]	
(e)	Suggest one reason why it is difficult, in this type of experiment, to decide on the best position	
	of the lens to obtain a sharply focused image on the screen. The lt is hard to find the best sharply focused	5 The candidate does not give a
	image because of the small difference between imager.	convincing reason, showing a lack of familiarity with this type of
	. [Total: 7]	experiment.
		Mark awarded for (e) = 0 out of 1
		Total mark awarded = 6 out of 7

**(e)** The candidate should have explained that the image could appear equally well focused over a range of lens positions.

# Example candidate response - middle

### **Examiner comments**

3 A student is investigating the magnification of images produced by a lens.

The apparatus is shown in Fig. 3.1.

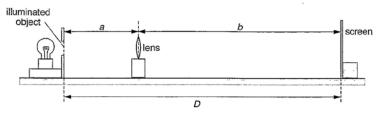

Fig. 3.1

The student places a screen at a distance  $D=80.0\,\mathrm{cm}$  from an illuminated object. The screen and the illuminated object remain in the same positions throughout the experiment.

(a) She places the lens close to the illuminated object. She moves the lens until she sees a sharply focused, enlarged image of the object on the screen.

She measures the distance a from the illuminated object to the centre of the lens.

a = ..... 20.3 cm

She measures the distance b from the centre of the lens to the screen.

b = .....59.7 cm

Calculate the magnification  $m_1$  of the image, using the equation  $m_1 = \frac{b}{a}$ 

1 The calculation is correct.

Mark awarded for (a) = 1 out of 1

Ex	cample candidate response – middle, continued	Examiner comments
(b)	The student then moves the lens towards the screen until a smaller, sharply focused image of the object is seen on the screen.	
	She measures the distance $x$ from the illuminated object to the centre of the lens.	
	x =60.2cm	
	She measures the distance y from the centre of the lens to the screen.	
	y =19.8 cm	
	Calculate the magnification $m_2$ of the image, using the equation $m_2 = \frac{y}{\chi}$ .	2 The calculation is correct.
	$m_2 = \frac{0.33}{2}$ [1]	Mark awarded for (b) = 1 out of 1
(c)	A student suggests that $m_1 \times m_2$ should equal 1.	
	State whether the results support this suggestion. Justify your answer by reference to the results.	The candidate calculates $m_1 \times m_2$ correctly but does not state that 0.97 is very close to 1 and therefore the results support the
	statement the magnification of the image is the same	suggestion within the limits of experimental accuracy.
	justification The magnification wouldn't be the same so matter here	Mark awarded for (c) = 0 out of 2
	the lens is placed because it can change according to where  1294 x 0-33= 0.97 (3) [2]	wark awarded for (c) = 0 out of 2

Steps: O According to the diagram, connect the circuit with the measured apparatus, and connect a firm resistance wire, largth by metre of close the switch, read the current on the annuater. I and the potential difference on the witnesser. I and the potential difference on the witnesser. I and record them onto the table p.d.  3 Use the formula, resistance = current calculate as R the resistance of this wire rand record the data.  5 repeat the experiment only change the wires measured by meter null, they are with different lengths, V total 15 cm, 20 cm, 25	2 The method includes taking readings of current and potential difference using at least five different lengths. The range of different lengths is appropriate.
Tength of recovered wireless I / A V / V R / Q 3	3 The candidate draws a suitable table with headings for length, current, potential difference and resistance, each with the correct unit.  Total mark awarded = 6 out of 7

The candidate needed to state any key variables to control.

# Example candidate response - middle **Examiner comments** A student is investigating how the resistance of a wire depends on the length of the wire. The student aims to plot a graph. The following apparatus is available to the student: ammeter voltmeter power supply variable resistor connecting leads resistance wires of different lengths metre rule. Plan an experiment to investigate how the resistance of a wire depends on the length of the wire. You should draw a diagram of the circuit you could use to determine the resistance of each wire explain briefly how you would carry out the investigation suggest suitable lengths of wire state the key variables that you would control draw a table, or tables, with column headings to show how you would display your readings. You are not required to enter any readings in the table. 1 The candidate draws a workable circuit diagram including

the correct circuit symbols.

Example candidate response – middle, continued	Examiner comments
First tonnect the lixual The length of wive should be 50 cm long.  First connect the connecting lead  8 the wive and connect the circuit  X Record the length of the wive which is connect into the lixuit and the Altage and the lixuit and the get the resistance of the wive Then change the position of the cometing In the X Regart the experiment In the X Regart you should not change the wire and the sectional area of the wire and the sectional area of the wire and the voltage of the battery 2	2 The method does not include taking readings of current and potential difference using at least five different lengths.  The candidate correctly suggests that the cross-sectional area of the wire is a variable that should be kept constant.  Total mark awarded = 4 out of 7

The candidate should have written a clear, brief method to include taking readings of current and voltage, using five or more lengths of wire and suggesting a suitable range of different lengths. Also the candidate should have drawn a table as specified in the question.

# Example candidate response - low **Examiner comments** A student is investigating how the resistance of a wire depends on the length of the wire. The student aims to plot a graph. The following apparatus is available to the student: ammeter voltmeter power supply variable resistor switch connecting leads resistance wires of different lengths Plan an experiment to investigate how the resistance of a wire depends on the length of the wire. You should draw a diagram of the circuit you could use to determine the resistance of each wire explain briefly how you would carry out the investigation suggest suitable lengths of wire state the key variables that you would control draw a table, or tables, with column headings to show how you would display your readings. You are not required to enter any readings in the table. 1 The candidate draws an incomplete circuit, but the circuit symbols are correct. R

Example Candidate Response – low, continued	Examiner comments
Build a circuit like the diagram as shown, place different length of wire at the connecting leads, each one test for twice by change the resistance contained resistance, the contained resistance its length after testing in the circuit.  I wring the experiment, make sure each wire only need to test for twice, but different considerable resistance, the other one still need to test at these two resistance.  Then caculate.	2 The candidate mentions taking readings of current and voltage but there are no other important aspects of the method given.  The candidate does not state any
	key variables to control.
	Total mark awarded = 2 out of 7
	2 out of 7
[7]	
[Total: 7]	

The candidate should have drawn a complete circuit then written a clear brief method including taking readings of current and voltage, using five or more lengths of wire and suggesting a suitable range of different lengths. Also the candidate should have drawn a table as specified in the question.

Any key variables to control should have been mentioned.

### Common mistakes candidates made in this question

Writing a vague method that did not address the task set in the question, drawing an incomplete table (e.g. with units missing) and missing out the description of key variables to control.

# Question 5

### Example candidate response – high

### **Examiner comments**

5 A student is investigating the cooling of water.

Some of the apparatus is shown in Fig. 5.1.

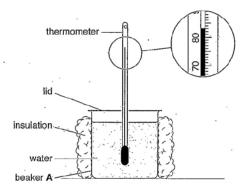

Fig. 5.1

(a) The student pours 200 cm<sup>3</sup> of hot water into a 250 cm<sup>3</sup> insulated beaker labelled A. He covers the top of the beaker with a lid.

The student takes a temperature reading every  $30\,\mathrm{s}$  as the water cools. The readings are shown in Table 5.1.

(i) Complete the column headings in the table. [1]

(ii) The starting temperature  $\theta$  of the hot water in beaker **A** is shown on Fig. 5.1.

Record this temperature in the table at time t = 0 s. [1]

Table 5.1

	beaker A insulation and lid	beaker <b>B</b> insulation, no lid	beaker <b>C</b> lid, no insulation

	material Glass.  reason An-expensive and it also catches	6 The candidate does not suggest
	reason an-expensive and it also catches water droplets. 6	a suitable material in the context of the experiment in a school
	[2]	laboratory.
		Mark awarded for (d) = 1 out of 2
		<u>I</u>

# Example candidate response – low, continued (e) Describe briefly how a measuring cylinder is read in order to obtain a reliable value for the volume of water. You may draw a diagram. The assuring cylinder is read in order to obtain a reliable value for the volume of water. You may draw a diagram. The candidate does not show in the diagram or description how to obtain a reliable reading for the volume. Mark awarded for (e) = 0 out of 2 Total mark awarded = 3 out of 10

### How the candidate could have improved the answer

- (a) The unit of temperature °C was required.
- **(b)** The candidate should have arrived at the correct conclusion from the results and then justify that conclusion.
- (c) Second valid condition was not stated.
- **(d)** The candidate should have suggested a suitable material and reason, in the context of a school laboratory.
- (e) The candidate needed to show in the diagram or description how to obtain a reliable reading for the volume.

### Common mistakes candidates made in this question

- Drawing the wrong conclusion in part (b).
- Writing a vague answer for one of the conditions that should be kept the same.
